How to Hack A Facebook Account

And How To Protect yourself From Hackers

Please take note that this is for educational purposes only and not to be used as a means to scam or attack other facebook users. The reason I am sharing this is because I want you to be aware that your FB account can be hacked and how you can protect yourself from it. Also, there are so many fake so-called "hacking tools" that are actually coded to appear as if it is attacking and retrieving facebook passwords from an email you provide. But in reality, it is impossible to hack facebook directly. Meaning a simple visual basic program (usually used by wanna be hackers) cannot, in any way, penetrate the highly secured database of facebook. I can easily write those fake programs in less than 2 minutes and it would appear to be real but is only doing some visual effects to let the user believe it is hacking facebook.

There are other ways however that a facebook account may be hacked, and your account is no exception. This includes some clever program that retrieves all passwords and emails from a specific computer. This kind of program is most effective when used in public computer shops like public internet cafes or public libraries and similar places. You simple run the program and it retrieves all files logged in to facebook.

That why it is most advised to avoid using your facebook account especially in public places where one computer is used by several persons in one day. If you really feel the need to open your account in such places, make sure to run a keylogger detector program. Then you must always clear the browser cookies **before** logging in **and after** logging in to your facebook account.

You can download a sample program here

Keylogger Detector program (small file that you can upload to your email and download it whenever you need to use it in a public internet café or public library)

Aside from protecting your FB account, keylogger also protects all your email login details. Not to mention your login info to your favorite online games

The other trick to hack a facebook account is through the use of a fake login page. Here is a sample email that you might receive from a hacker:

Sub: _Invalid activity on your facebook account_

Body:
Dear facebook user (victim's facebook user name),
Recently we saw some suspicious activity on your account, we suspect it as a malicious script. As a valuable user to us we understand this might be system error, if the activity is not generated by you then please log-in to your account by following link,
<link to fake login site>
Failing to log-in within next 48 hours Facebook holds right to suspend your account for sake of privacy of you and others. By logging in you'll confirm it is system error and we will fix it in no time. Your inconvenience is regretted. Thank you.

support@facebook.com,
Facebook, Inc,
1601 S.California Ave
Palo Alto CA 94394
US

So in this email, a person that is not security conscious might quickly click on the link and login. Unfortunately, the login link is not facebook.com/login.php but some other website. That login details are then stored and your account compromised.

An even trickier strategy is to share some scandal video on the wall that creates intrigue to friends, so convincing that they need to see that particular scandal. The video however is only viewable upon share. So when you are asked to log-in so that you can share the video, you are instead logging into a fake

page that looks exactly like facebook interface and thus your log in details in the hands of the hacker.

[Download a sample script of this hacking program here](#)

So as a lesson, always make sure to check the browser bar whenever you are asked to login to your facebook account. If the browser bar is not FACEBOOK.COM/LOGIN.PHP and some other site like OTHERSITE.COM/LOGIN.PHP, **NEVER EVER** login! So that your account details and your facebook account will not be hacked.
